

## Integrity Security Solutions

### Rings of Remediation

Characterized as “rings” to connote outward flowing concentric circles (as when a drop of water falls into a pool)...

Integrity has ability to consult and advise on virtually any security or resiliency issue you may have.

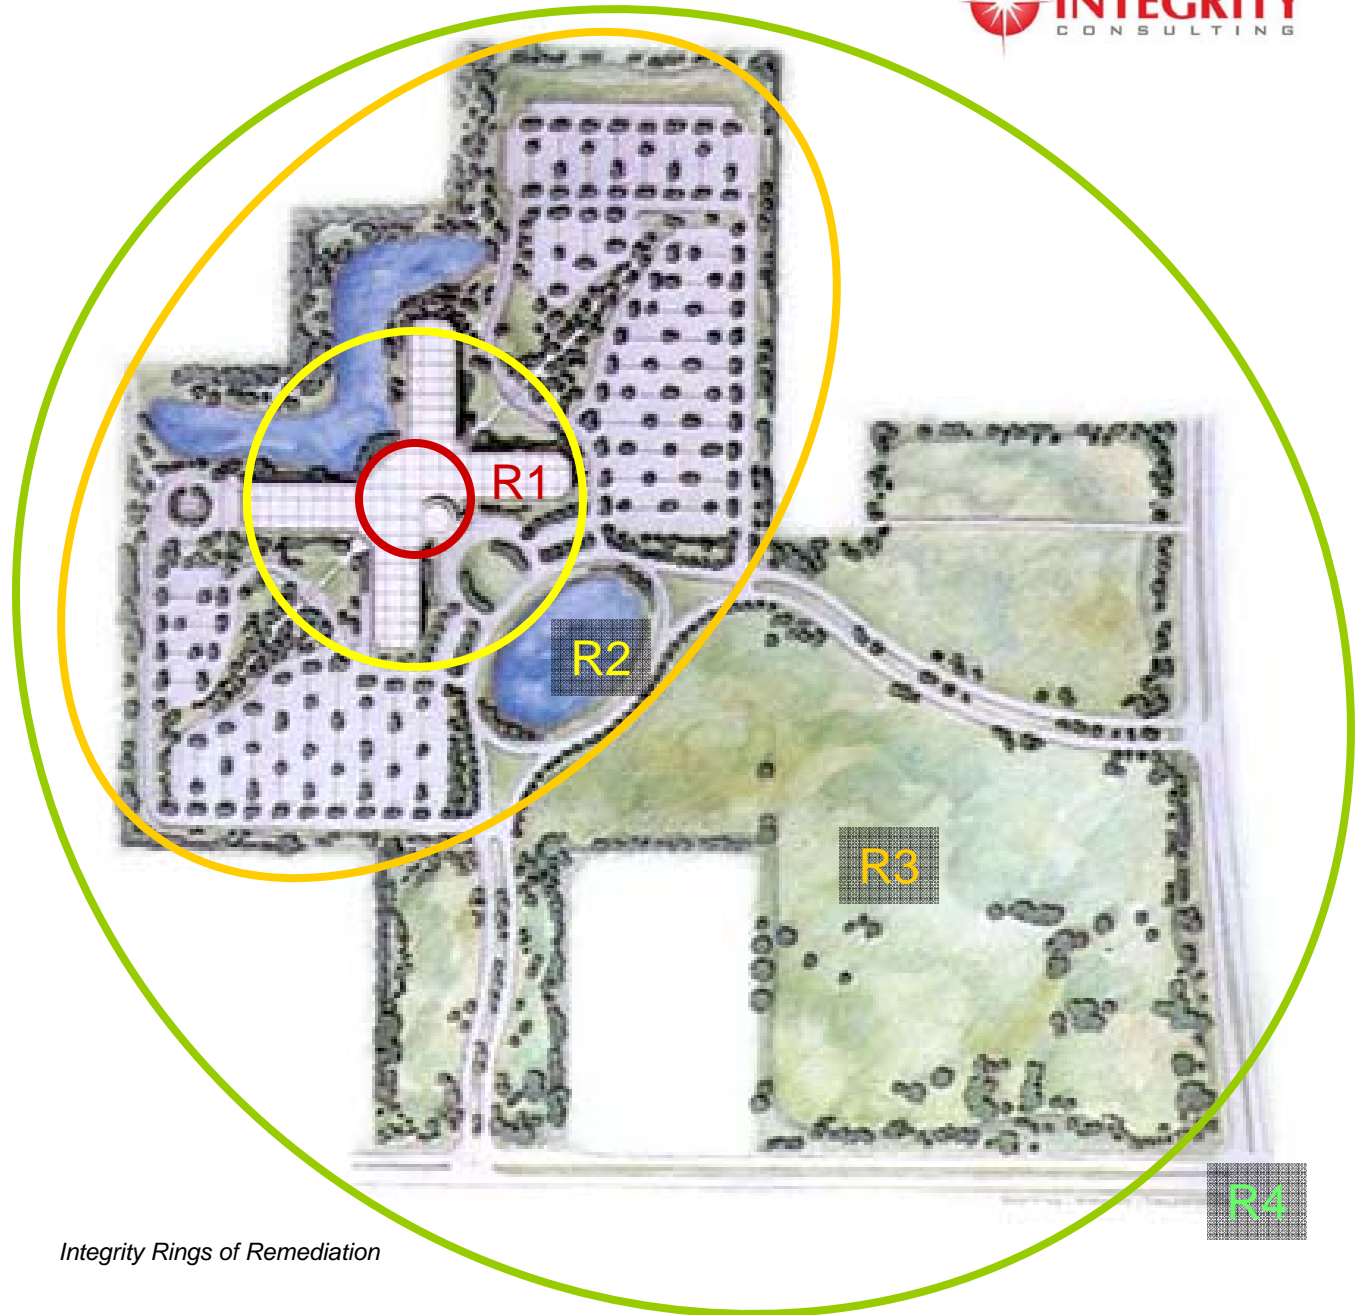

From literally inside your facility (e.g. background checks for prospective employees, mail handling, blast proof furniture, etc)

Ring 1 – Flowing through the skin and structure of the facility (e.g. window treatment, wall armoring, structural blast protection, non-friable architectural materials, etc),

Ring 2 - Flowing outward through the property or site on which your facility sits (e.g. security lighting, video surveillance, ground radar, seismic and acoustic sensors, vehicle barriers, etc)

Ring 3 - Continuing through the block or neighborhood or district you are in (e.g. Buffer Zone Protection Planning, CBRNE sensors and alert systems, etc),

Ring 4 - into the larger region in which you conduct business or reside (supply chain security, flu pandemic planning, evacuation planning and tools, emergency notification, etc)
